This course is an introduction to the critical management skills involved in planning, structuring, controlling and leading an organization. It provides a framework for understanding issues involved in both managing and being managed and it will help you to be a more effective contributor to organizations that you join. We develop a “systems” view of organizations which means that we examine organizations as part of a context, including but not limited to environment, strategy, structure, culture, tasks, people and outputs. We consider how managerial decisions made in any one of these domains affect decisions in each of the others.

MATERIALS:

We use a variety of source materials. The custom text “Introduction to Management” (Rosenkopf and Haas, MGMT-101) contains McGraw-Hill readings and HBS cases and can be purchased in either electronic form through the McGraw-Hill site (https://create.mcgraw-hill.com/shop/) or in print form through Wharton reprographics. One additional article and one multimedia case on CD-ROM may be purchased at Wharton reprographics as well. All other materials are available at no additional charge to you, either in the public domain or through the Penn library system, and are linked directly from the weekly reading and assignment summaries on Canvas. Please note that we cover material in lecture that is not included in the readings, yet is fair game for the final exam. If you cannot attend lecture, each week’s session is taped and available at https://spike.wharton.upenn.edu/media/index.cfm for your review.

GRADING:

The following components will be used to determine your course grade:

- Two on-line discussion contributions (5 points each for 10 points in total)
- Recitation attendance/preparation/participation (25 points)
- Interim quiz (10 points)
- Group project (20 points)
- Final exam (35 points)

Each assessment is explained in detail on Canvas under “Assignments”. To insure consistency in grading across the full set of students, recitations and TAs, each of the prior components will be normalized before a composite grade is calculated. While the exam will be normalized across the full set of students taking the course, the other components will be normalized for each TA or recitation.
