

## **Statistics 435/711**

Fall 2014

### **Instructor**

Paul Shaman, 457 JMHH, shaman@wharton.upenn.edu, 215-898-8749

### **Class Hours and Location**

TuTh 12–1:20, JMHH

### **Office Hours**

MTuTh 4:30–6, and by appointment

### **Course Materials**

Class notes. These are the main source material for the course. The notes will be posted throughout the semester on Canvas.

Tsay, R. S., *Analysis of Financial Time Series*, 3rd ed. Wiley, New York, 2010. Some supplementary reading will be assigned in Tsay's book, and the book will also provide data sets for discussion and for homework.

### **Software**

JMP 11 statistical software. I *highly recommend* you buy the software so that you have it on your own computer. We will use it extensively in class, and you will need to know how to read its output and use it for assignments and for reading class notes. When you install the software on your computer you will also have installed seven manuals and two cards for quick reference, all in pdf format.

A three-year JMP 11 license may be purchased for \$59.95 at [upenn.onthehub.com](http://upenn.onthehub.com). Shorter term licenses are available from [estore.e-academy.com](http://estore.e-academy.com). A six-month license costs \$29.95 and a twelve-month license sells for \$49.95. If you have an earlier version of JMP, it will be sufficient.

JMP 11 software is installed in the Wharton computer labs, all in Huntsman: F75 (60 seats), F80 (29 seats), 375 (80 seats) and 380 (80 seats).

## Course website

Statistics 435/711 is using Canvas. You can gain access by going to <https://canvas.upenn.edu/>. All notes, homework assignments and data sets for the course will be distributed and managed via the website.

## Course Description

The aims of this course are to introduce basic time series and forecasting techniques. The emphasis will be upon the use of statistical methodology, and the written communication of statistical results. Considerable time will be devoted to understanding statistical and econometric problems in the contexts in which they arise, and to proper selection of statistical techniques and interpretation of the statistical output.

As noted above, the primary class materials will be instructor's notes; the text will be supplementary. JMP software will be used extensively in classroom presentations and will be incorporated into the class notes. The software offers excellent graphics which will be useful for picturing data and illustrating methodology.

For methods not covered by JMP we will employ R. R will not be required for the homework assignments.

There will be five homework assignments. Each will involve the analysis of data sets and interpretation of the findings, and the presentation of a clearly organized and presented written report. The homework is designed to teach and to give experience in the use of time series methodology. You are encouraged to consult with each other in doing the homework, and also to contact me for help. ***File sharing is not permitted, and you must submit your own writeup, with your own calculations.*** Homework must be submitted by the due date specified for the assignment.

There are no examinations.

## **Calendar**

There are 28 classes.

The first class is Thursday, 28 August.

The drop period ends Friday, 3 October.

There is no class Thursday, 9 October (Fall break).

The withdrawal deadline is Friday, 7 November.

There is no class Thursday, 27 November (Thanksgiving).

The last class is Tuesday, 9 December.

## **Topics**

The primary goal is to present time series techniques. Basic multiple regression will be reviewed at the beginning, and additional regression topics will be presented as they are needed. For the most part, because of time limitations, attention will be focused on univariate series. Data sets studied will be primarily, but not exclusively, business and economic time series, including financial market data.

Multiple regression methods

Distributed lag models

ARIMA models

Spectral methods

Exponential smoothing

Combination of forecasts

ARCH and GARCH models
