EMPIRICAL MODELS IN MARKETING
(MKTG 957)

Spring 2016

Professor Eric T. Bradlow
The K.P. Chao Professor, Professor of Marketing, Statistics, and Education

Marketing Department Small Conference Room: 757 JMHH
Friday 9am – 12:00pm

Objectives:

This seminar-based class is designed to introduce doctoral students to the fundamental empirical models and estimation methods utilized in quantitative academic marketing papers. That is, if this class is successful, you should know the basic purpose, data requirements, mathematical formulation, and equally important the jargon/verbiage, associated with a wide assortment of quantitative marketing models.

Outline of Each Class Session:

Each class session will have a similar structure. We will review two published papers (in some cases possibly three), consisting of a “classic marketing paper” that seminally introduced a concept/model to the literature, followed by a more recent updated version of the same concept. In this manner, students will become familiar with the tradition of marketing science, but also gain knowledge of “modern updates” to those papers. Given that only two papers are assigned for each week, a deep and detailed coverage of each paper, with detailed pre-reading on the students’ part, is expected.

Course Materials and Website:

Copies of the papers sit on the course canvas site which can be accessed by logging into (https://wharton.instructure.com/login).
Grading:

Your grade in the course will consist of three parts.

(i) Each week, you are required to turn in AT THE BEGINNING OF CLASS, a no more than 5 page summary of the papers from that week. These short summaries will be graded based on your ability to: (i) concisely summarize the papers, (ii) provide a description of opportunities to extend these papers into novel research areas, (iii) your ability to raise critical questions about any aspect of the paper of your choosing, and (iv) most importantly, tie one or more of the papers to a problem that YOU ARE WORKING ON.

(ii) The reason that we are meeting as a class is for you to share your ideas with others. Come to class prepared to discuss both papers that are assigned.

(iii) As a final project, I will ask each of you to construct a no more than 15 minute presentation summarizing “Lecture N+1”. That is, if there was one additional lecture, what would it be on? You pick the paper, or two papers, write up a summary of them (20 pages or less), and prepare a presentation on the topic.

Course Outline

Session

1. January 15th  Choice Models/Loyalty

2. January 22nd  Conjoint Analysis

3. January 29th  Integrated Models for Multiple Outcomes/Product Categories

4. February 5th  Diffusion Models

5. February 12th  CLV/Attrition Models

6. February 19th  ATTEND WHARTON MARKETING CAMP

7. February 26th  VARX Models

8. March 4th  Learning Models

9. March 11th  SPRING BREAK [NO CLASS]
10. March 18th   Heterogeneity

11. March 25th   Hidden Markov Models

12. April 1st   [NO CLASS OR GUEST SPEAKER]

13. April 8th   Endogeneity

14. April 15th   Choice Models with Aggregate Data

15. April 22nd   Student Presentations of Lecture N+1
