MGMT 784: Managerial Economics and Game Theory, Q1, 2018

MGMT 784 is a short elective course in Game Theory and Strategy. The purpose of this mini-course is to develop students' abilities to apply game theory to managerial decision-making. While the course does help students understanding of some core theoretical concepts such as simultaneous, sequential, mixed, and incomplete information games, the emphasis is instead on application to situations involving market entry, market deterrence, pricing, product differentiation, and yield/revenue management. The course will make extensive use of Game Theory not only in business strategy but also include examples from popular culture including movies, television shows and literature. This is a very applied course and will have very limited theoretical treatment of the topics. Students wishing a more theoretical treatment should consider other courses.

Prerequisites

None

Materials

Course-pack from Study net

Grading

Written Analysis	80%
Class Participation	20%

Study Guide and Course Outline

August 29th Session 1 – Introduction to Games of Strategy

Strategic games, timing, information, players, strategies, and payoffs

Readings:

Making Game Theory work for Managers, McKinsey Quarterly
 Games of Strategy: An Introduction (HBS # 9-187-159)
 Game Theory and Business Strategy (9-705-471)

Movie: Dark Knight and Dark Knight Rises

Part I: Competitive Pricing

Readings:

Dogfight over Europe: Ryan air (A) (HBS# 9-700-115), Ryan air (B) (HBS # 9-700-116)

September 5th Session 2 Sequential Games and Price Predation Strategies

Questions:

What are Ryan Air Options?

Options for British Air?

September 10th Session 3: Backward Induction: Pricing Strategies and Credibility

Readings:

Sequential Entry (9-190-102)

Questions:

1. How many firms will enter the industry?
2. How much will each firm spend on advertising?

What will be the firms' profits?

Is the British Air threat credible?

What should the Ryan Brothers do now?

September 12th Session 4: Deep Pockets and Last Man Standing

Readings

Deep Pockets (9-190-101)

Questions for the Readings

1. As a potential entrant into the industry how do you assess the possible reaction of the incumbent firm to your entry? Do you expect to be accommodated?

** Assume that the entrant must show a profit by/in quarter 12*

September 17th Session 5: Fog of Business and Mental Models

Readings:

Fog of Business (5-795-169)

Questions:

1. Draw the game in extensive form. Begin with E1's decision whether to enter or not.
2. Determine the payoffs and Nash Equilibrium for the game
3. Should player E1 enter market 1?

Briefly discuss what assumptions are you making as what E1 believes- about the players' rationality, about what the players believe about one another's rationality,

Now how should Ryan Air think about British Air's likely strategy?

Part II Market Entry and Structure

September 19th Session 6: Judo Economics and Market Structure

Readings:

Judo Economics (9-794-103)

Questions for Judo Economics

1. Suppose that: (a) each buyer has a willingness-to-pay of \$200 for one unit of either the incumbent's or the entrant's product; and (b) both incumbent and entrants have a

\$100 unit cost of serving buyers. Formulate a strategy for the entrant. How much money can the entrant make?

2. Now suppose that: (a) each buyer has a willingness-to-pay of \$200 for one unit of the incumbent's product and \$160 for one unit of the entrant's product, and (b) the incumbent has a \$100 unit cost and the entrant a \$120 unit cost. Formulate a strategy for the entrant. How much money can the entrant make?
3. Finally, suppose that: (a) each buyer has a willingness-to-pay of \$200 for one unit of either the incumbent's or the entrant's product; and (b) the incumbent has a \$120 unit cost and the entrant an \$80 unit cost. Formulate a strategy for the entrant. How much money can the entrant make this time?

September 24th Session 7: Product Differentiation and Proliferation

Readings

Competition and Product variety (9-190-100)

Product Proliferation and Preemption (9-190-117)

Questions

1. Which product types will managers at firms A and B decide to manufacture? State the logic underlying your beliefs?
2. Assume that firm A enters the market first. If A's managers wish to deter entry by B, which products should they produce and why?
3. Assume A has a monopoly position. What products should A's managers produce and why? Do A's managers want to serve the entire market?

Hint: Remember that the model is symmetric since demand is uniform. That is the prices

September 26th Session 8: Rebate Game

Readings

HBS (795121) The Toy Game

Questions:

1. What's the expected price level if there are no rebates?

2. What happens if one seller offers a rebate where the buyer is entitled to one dollar off on the next purchase?
3. How should the rival retailer respond ?
4. What happens if both retailers use the rebate strategy?
5. What are the limitations of this strategy?

Part III: Applied Mixed Strategies

October 1st Session 9: Mixed 1-Mixed Strategies and Pricing

Readings:

Simultaneous Move Games with Mixed Strategies

October 3rd Session 10: Mixed Strategies and Capacity

Readings:

The Mother of All Price Wars (KEL006-PDF-ENG)

October 8th Session 11: Mixed Strategies and Product/Product Segmentation

Readings:

Movie Release Dates

Part IV Signaling Price, Cost, Quality

October 10th Session 12: Signaling Information: Cost and Quality

Readings:

Signaling Costs (9-793-125)

1. Might player A want to try to signal its cost position to player B?
2. Is there a way for it to do so? In answering, pay particular attention to the question of the credibility of any signal that A might send B.

October 15th Session 13 Signaling Quality in a Job Market Tournament

Readings:

TBA

October 17th session 14: Game Theory, Signalling, Diversity, Managing People at Work

Instructions for Written Analysis:

The written analysis should be based on a strategic situation of your choice. Your chosen situation must be one where payoffs are interactive. That is the payoff to one player depends on the strategic choice of other players. The paper should develop a game/decision tree to depict the situation, and then use the tree to analyze the relevant strategies.

Your decision tree should show some of the following

Players
Strategic options
Order of moves (i.e., sequential or simultaneous)
Time period (i.e., one shot or repeated)
Information of the players (i.e., asymmetric, incomplete)
Payoffs

Your paper should also include the following

General background: 1-2 pages: You should provide some general description of the key players. You should also describe the strategic choices (e.g., price, market entry, new products, and advertising) available to the players.

5-6 pages of analysis of strategic decisions made in light of your game tree

Suggested Paper Length including all exhibits: 8-10 pages, doubled spaced, 12 point font, One inch margin, header (team member names)

Date Due: October 24th

Meetings with Professor Thomas:

All students are required to have one meeting with Professor Thomas to discuss topic. Meetings re generally more productive if students email an outline of the topic prior to meeting. Meetings can take place during normal office hours or by appointment

Payoffs:

It is not expected that teams obtain primary financial/performance data. In order to determine payoffs, any of the following are acceptable

1. Easily or readily obtained primary data (e.g., internet searches)
2. Algebraic Values
Payoffs for a player/firm usually functions of price, variable costs, market share, and fixed costs. Thus best strategies are a function of these values.
3. Plausible values

Delivery Instructions: Students should post their papers to web café no later than the due date. Pdf format preferred.

Examples of Prior paper topics. Some prior papers are also available on web café

Pre-nuptial Agreements

Labor v Management collective bargaining
NFL, NBA, MLB

Sporting Events

New England Patriots v Indianapolis Colts on 4th down, November 2009
