**Overview and Procedures**

You may want to start a new venture upon graduation. Even more likely, you may find yourself launching a new venture as your career develops. You may find yourself working for an entrepreneur, funding entrepreneurs, or having to work with them. Or you may simply want to be more entrepreneurial in your own career. The purpose of Management 801 is to be helpful to you under any of these circumstances with a whirlwind tour of the many dimensions of new venture creation and growth. We will be concerned with issues that relate to conceptualizing, developing and managing successful new ventures.

As the entry level course in Entrepreneurial Management, MGMT 801 also serves a gateway for other courses that will allow you to further pursue your interests in specific entrepreneurship domains (e.g. venture capital investment) through Wharton Entrepreneurship.

The class is highly experiential and hands-on, combining interactive classroom sessions with a startup hackathon designed to familiarize you with the many dimensions of entrepreneurship. Most of the examples we discuss in class will relate to venture formation, but the underlying the interdisciplinary principles – drawn from applied economics and organizational behavior to strategy and finance – will also apply to entrepreneurship in corporate settings and to non-profit entrepreneurship.

---

**Grading**

- 40% Class Participation
- 40% Team Hackathon
- 10% Individual Idea Assignment
- 10% Individual Final Reflection Essay
**Class Participation (40%)**
You are expected to be present during class and well prepared to discuss the case studies and reading materials. I am very sympathetic to the fact that we are still climbing out of a pandemic, so please let me know if you are having any trouble or have suggestions; we'll make this work. Class participation contains two components:

1) **Attendance and Participation (20%)**: Especially in an area like entrepreneurship, learning largely occurs through peer interaction, and accordingly, respect for your colleagues' comments will be expected at all times. Everyone is allowed 1 absence; each absence beyond this will result in a **reduction of 3 percentage points** in the total attendance score.
2) **Daily Memos (20%)**: Before each discussion-based class (8 total), a short 3-minute question will be posted on Canvas. These open-ended questions are designed to help organize your thinking for the next session's classroom discussion. Responses should indicate and briefly justify your answer choice. Responses will not require anything beyond your normal preparation for class.

**Individual Idea Assignment (10%)**
Each student will independently develop two startup ideas. For **idea #1**, explore newly patented technologies in our Penn ecosystem¹ and develop a startup idea (i.e., a commercial application) based on a chosen technology. For **idea #2**, identify a “pain point” that you or someone you know have experienced and develop a startup idea in response. Further details to be discussed in class and described on Canvas.

**Team Hackathon (40%)**
For most of the class, you will work in a team (4-7 people) to test and develop a new venture idea. Ultimately, each team will present a final pitch deck that covers all key aspects of the venture towards the end of this course. This hackathon will contain 4 deliverables throughout the course (listed below):

**Team-based Deliverables** (must submit directly via Canvas):
*The Hackathon Guide on Canvas provides specific instructions for each deliverable.*

1. **Team Registration (5%)**: Each team will register by listing its members and also briefly describe the venture such as the problem your team seeks to address.
2. **Customer and Problem Discovery (15%)**: This exercise will lead teams to gain first exposure to potential customers and begin hypothesis formation and testing.
3. **Entrepreneurial Strategy (10%)**: Each team will examine its unique competitive landscape and choose an entrepreneurial strategy.
4. **Final Pitch Deck (10%)**: To conclude the hackathon, each team will submit a final pitch deck – the final file to be used in the actual pitches during the last class. Again, the Hackathon Guide provides specific instructions along with the criteria used to evaluate the quality of the pitches.

Pitching & Team Formation
During the hackathon kickoff, each student will pitch 1 idea that they are potentially interested in developing during the course. Based on these initial pitches, we will form teams during the session. Specific instructions for pitching and team formation will be provided during the prior class and on Canvas (“Hackathon Guide: Kickoff”).

Peer evaluation
The individual grade on the group assignments will be weighted based on peer review. You will be asked to rate the contribution of each member of your team by assigning a percentage score that reflects their effort. Therefore, individual grades are likely to vary within each team.

Individual Final Reflection Essay (10%) 
In a short essay (no more than 500 words), please reflect on the two following prompts:

1. Discuss one key conceptual takeaway from this course, and why it’s important.
2. Describe one concrete action you can take at your organization (prior or upcoming job) to apply this insight, even if it’s not a startup. Be sure to articulate the context of the organization (i.e., its needs and challenges) and specifics of the proposed action, as well as discuss the intended outcome(s) and the limitations.

Course Policy
Course Dinners
As a chance to connect outside class and get to know each other, I will be hosting optional dinners on Wednesday evenings at a restaurant near campus. Each dinner is capped at 6 students on a “first come, first served” basis. Sign-ups are available on Canvas under the Calendar tab.

Academic Honesty
There is a zero-tolerance policy for academic dishonesty. Cheating, plagiarism, or turning in another’s work as your own will result in a failing grade for the class. When using externally sourced ideas, be sure to properly cite the original work in your writing.

Moderate use of Generative AI permitted
You may use generative AI programs (e.g., tools like ChatGPT) to help generate ideas and brainstorm. However, you should note that the material generated by these programs may be inaccurate, incomplete, or otherwise problematic. Beware that use may also stifle your own independent thinking and creativity. You may not submit any work generated by an AI program as your own. If you include material generated by an AI program, it must be cited like any other reference material (with due consideration for the quality of the reference, which may be poor). Any plagiarism or other form of cheating will be dealt with severely under relevant Penn policies.

No Laptops in Class
Please refrain from using your laptop computer or tablet in class as you will not need it for our classroom discussions. The only exception is the hackathon work session.
**Intellectual Property**

The philosophy of the class is that you are far more likely to be helped then hurt by talking about your idea with everyone who will listen. Chris Dixon gives an argument about why this is so here. Nonetheless, you are entirely responsible for protecting your own intellectual property, though intellectual property theft has never been a problem in Management 801. If there is any part of your business idea that you would not like to disclose, then you should simply not disclose it, or select a different business idea. Unfortunately, the instructor cannot sign any non-disclosure agreements related to this course. Some classes may be recorded for students who cannot make it. If you have any questions about this policy, do not hesitate to ask.

**Course Outline**

All required readings, Hackathon materials, and daily memo questions are posted on Canvas. All assignments are due 9 PM the night before class.
